- **Typing Speed Test & Practice Web Application**

This application focuses specifically on typing speed measurement and improvement.

Introduction

In today's digital world, typing is an essential skill for students, professionals, and job seekers. Fast and accurate typing improves productivity and efficiency.

TypeMeter is an interactive web application designed to help users test and improve their typing speed in a simple and engaging way.

This project will be developed using:

- **HTML**
- **CSS**
- **Bootstrap**
- **JavaScript**

Purpose of the Application

Typing is an essential skill for students and professionals. This application provides a simple platform to practice and evaluate typing performance.

The main purpose of this web application is:

- **To allow users to practice typing using guided sentences.**
- **To measure typing speed in Words Per Minute (WPM).**
- **To provide an interactive and responsive user experience.**
- **To help students improve their typing accuracy and speed.**

Target Audience

- **University students**
- **School students**
- **Beginners learning computer skills**
- **Anyone who wants to improve typing speed**

The application is designed to be simple and easy to use for all users.

Core Features to be Implemented

1. Typing Test with Timer

- 60-second countdown timer
- Sample text display
- Automatic speed calculation (WPM)
- Result display section

2. Typing Practice Mode

- Practice text area
- Timer starts when user begins typing
- “Go Again” option
- Encouragement messages

3. Typing Tips Page

- List of professional typing improvement tips
- Clean layout using Bootstrap components

4. Navigation System

Responsive navigation bar
